
Statistical Validation: χ^2 Distribution with EDOF = 3
Principia Metaphysica v24.1 Fit Quality Assessment
EDOF vs. Traditional DOF:
- EDOF = 3: Reduced chi^2 = 746387367.539
- Traditional DOF = 63: Reduced chi^2 = 35542255.597
EDOF properly accounts for topological
correlation structure (3 independent seeds).
Traditional DOF assumes independence,
which violates PM's unified topology.
chi^2 Distribution (EDOF = 3)
chi^2 Distribution (Traditional DOF = 63)
Trust Zone (p in [0.05, 0.95])
Too Good (p > 0.95)
Poor Fit (p < 0.05)
PM Observed: chi^2 = 2239162102.617
Expected Value: chi^2 = 3
